

## **freedomRail® Offers Storage Solutions that are ADA Compliant**

**Cincinnati, Ohio (February 7, 2012)** freedomRail is a versatile storage system, manufactured to the highest quality standards. These attributes combine to make it suitable and beneficial for all ADA projects.

freedomRail offers functional storage solutions for any area of the home without compromising style. It is truly adjustable, therefore giving it the versatility to meet any ADA requirement. For instance:

- The only part of the freedomRail system that gets installed in the wall is the rail. Everything else can be adjusted up, down, left or right at any time without tools.
- freedomRail components are attached to the wall, therefore freeing up floor space. This gives wheelchairs and walkers the clearance that they need.
- ADA requirements say that the maximum high forward reach allowed is 48 inches. The minimum low forward reach is 15 inches. freedomRail systems can be arranged to meet both of these guides.
- If clear floor space allows parallel approach by a person in a wheelchair, the maximum high side reach is 54 inches and the low side reach is no less than 9 inches above the floor. Again, freedomRail can be adjusted to meet these requirements.

“freedomRail’s adaptability is particularly beneficial in facilities that frequently change occupants,” said Jennifer Castenson, vice president or marketing at SCHULTE. “When one occupant has a disability that gives them different reach than the previous occupant, freedomRail can easily be adjusted to meet their new needs. And it can be done without any lost costs, while completely being customized to the needs of the occupant.”

In addition, freedomRail is easy to install, so projects go up quickly and easily. And because it is made with the highest quality engineering, it will last through years of the most active use.
